E-mail: HC.Goh@notes.fairchildsemi.com  
Phone: 6437211EXT2305

Implementation of change:

Expected 1st Device Shipment Date: 2009/08/31

Earliest Year/Work Week of Changed Product: 0924

Change Type Description: Backside Condition

Description of Change (From): Selected devices that are currently tested and packed in Amkor Technologies, Inc., Taiwan are back laminated. Back laminate is a polyester tape applied to the back of the units to minimize package chips during saw dicing.

Description of Change (To): The selected devices will be manufactured without back laminates. Overall dimensions of the package will remain unchanged. The package chipping specification for non-laminated device will remain the same as back laminated device. Units' marking contrast maybe affected and adjustment to the mark vision system's parameter on the mounter maybe required when changing from back laminated units to non-back laminated units. Existing warehouse inventories with back laminate will continue to be shipped until the inventories have been exhausted. Fairchild will then inform affected customers on the phasing in of non-laminated products. Fairchild will control the shipment of devices to ensure no mixing of back laminated and non-laminated products within a shipment.

Reason for Change : To reduce products variability and increase inventory flexibility to provide better support to customers, Fairchild will standardize its WLCSP portfolio to have no back laminate.

Product Id Description : WLCSP Products for Nokia
